Our vision

At Pannonia Aero Technics, aircraft interiors represent more than aesthetics — they represent precision, reliability, and craftsmanship.

Our mission is to deliver interior solutions that meet the demanding standards of the aviation industry while improving comfort, durability, and cabin functionality.

Through careful material selection, advanced technologies, and attention to every detail, we create solutions designed for long term performance in aviation environments.

01 interior remodelling

Aircraft interiors must balance comfort, functionality, and durability.

Our remodelling services focus on improving cabin environments while respecting the strict standards required in aviation.

From concept development to final installation, every detail is carefully considered to enhance both the appearance and performance of the aircraft interior.

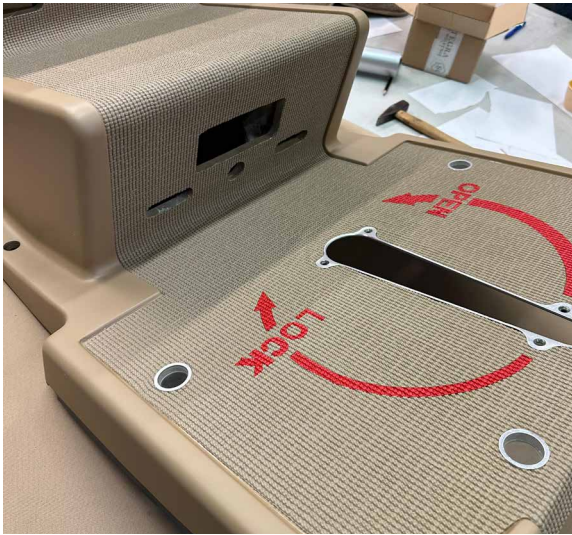

02 plastic restoration

Interior plastic components are constantly exposed to wear, UV light, and operational stress. Our restoration process renews worn or damaged aircraft plastic parts, restoring their appearance and durability while maintaining the professional standards expected in aviation interiors.

The result is a refreshed cabin environment with long-lasting performance.

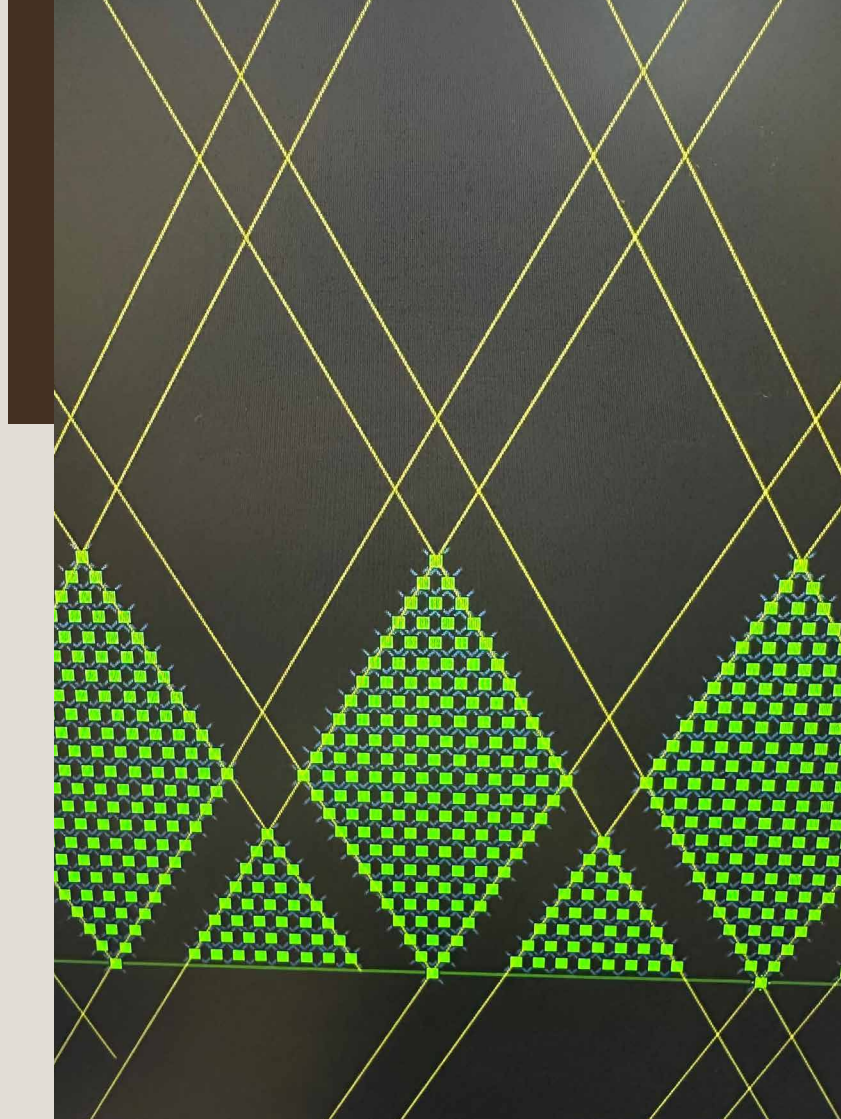

03

precision CNC cutting

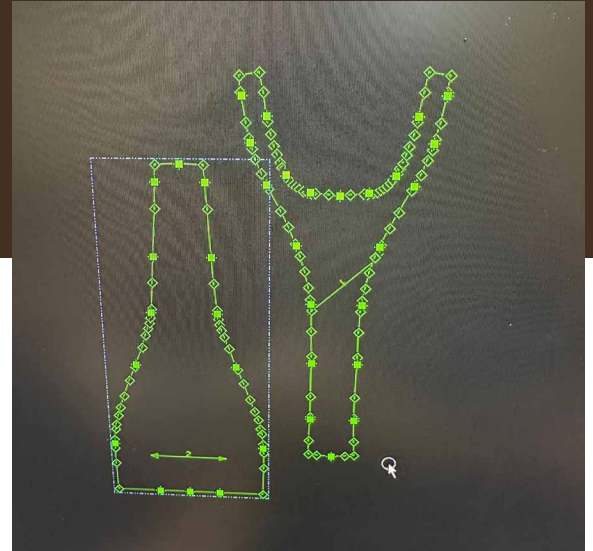

Using advanced CNC cutting technology, we manufacture highly accurate components for aircraft interiors and technical applications.

This process allows us to achieve clean edges, complex geometries, and exceptional repeatability while maintaining consistent production quality.

CNC cutting ensures efficient manufacturing and superior finishing standards.

04 engine & windshield covers

Engine covers must provide reliable protection while maintaining durability and precise fit.

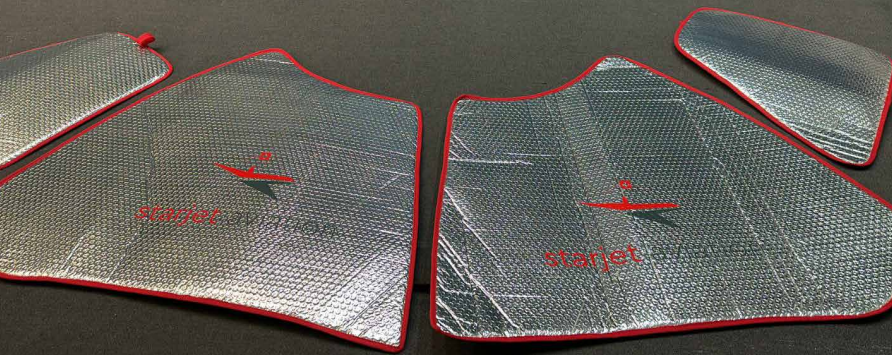

We manufacture and refurbish high quality engine covers designed to withstand demanding aviation environments while protecting critical aircraft components.

Each cover is produced with careful attention to materials, craftsmanship, and long-term usability.

Windshield covers protect sensitive aircraft surfaces from sunlight, dust, and environmental exposure. Our covers are produced from durable aviation grade materials and designed for easy installation, secure fit, and long service life. They provide reliable protection while maintaining professional appearance.

05 Aircraft accessories

In addition to core services, we produce a range of custom aircraft accessories designed to improve cabin functionality, protection, and organization. All accessories are manufactured with the same focus on durability, precision, and practical design that defines our work.

Our trusted customers

Pannonia Aero Technics works with aviation professionals who value precision, reliability, and consistent quality.

Through successful collaborations and long-term partnerships, we have built a reputation for delivering dependable interior solutions tailored to the needs of aircraft owners, operators, and maintenance organizations.

Why choose us

WE CREATE SOLUTIONS DESIGNED FOR LONG-TERM PERFORMANCE

- ✔ Precision craftsmanship
- ✔ Aviation-grade materials
- ✔ Customized interior solutions
- ✔ Reliable long-term partner
